

### Mold Maintenance Highway Jammed at Amerimold

The Mold Maintenance Highway was quite busy – at times to the point of seeming like a “traffic jam” – during Amerimold last week. ToolingDocs and several of its Tech Partners were exhibiting and drew lots of attention in its third year at this trade event for mold manufacturing.

“The foot traffic was good and we met many people who were interested in learning about products and services targeted to mold repair and maintenance,” said Steve Shannon, ToolingDocs’ operations manager. “Our Tech Partners were enthusiastically demonstrating their products and of course ToolingDocs brought many new items to display, including our new Mold Maintenance Bench, a MoldTrax 6 demo and more.”

ToolingDocs also hosted a new Workshop session on Day Two of Amerimold. Titled “Making Maintenance Profitable”, the session focused on how to use systemized mold maintenance as a way to cut costs and boost productivity in one’s plant. The program received high marks from attendees.

### New ToolingDocs Catalog Released

ToolingDocs’ new Toolroom Innovations catalog was introduced at Amerimold and is full of new products and services designed to advance mold performance, including Certification Training course descriptions, On-Site Training services, Tech Partner information and more.

Additionally, ToolingDocs also released two new products: the Cable Checker and Mold Checker.

The Cable Checker tests hot runner cables in a matter of minutes to ensure proper connectivity, while the Mold Checker tests hot runner manifolds to ensure that resistances of all thermocouples and heaters are within range. Both devices are portable and enable significant reduction, if not elimination, of downtime due to faulty or mis-wired components within the cables or hot runner system respectively.

Click [HERE](#) to view the catalog online, or call 1-800-257-8369 to order a printed edition.

The new Cable Checker (left) and Mold Checker are among the many new products featured in ToolingDocs’ new Toolroom Innovations Catalog.

### Hot Runner Repair

Through this course, technicians will learn solid, maintenance practices in the care and feeding of hot runner tools.

### MoldTrax Software

Hear from users why this unique program is an indispensable efficiency-building, cost-cutting tool for their companies.
