

Tooling Transfer Services

What is it?

ToolingDocs' Tool Transfer services feature standard, proven processes to ensure successful relocation of molds.

Ideal for companies experiencing plant closings and capacity shifts where tooling is being moved from one location to another – or for those simply requiring careful shipment of tooling to or from anywhere in the world – ToolingDocs specializes in eliminating mold management problems before they occur.

How?

ToolingDocs' experienced mold maintenance staff is equipped with the latest skills, equipment and systems to effectively prepare tooling for safe shipment in its most optimized production-ready condition. Tooling arrives at its destination ready to plug-and-play, saving customers from costly down-time.

Tailor Our Services to Your Needs

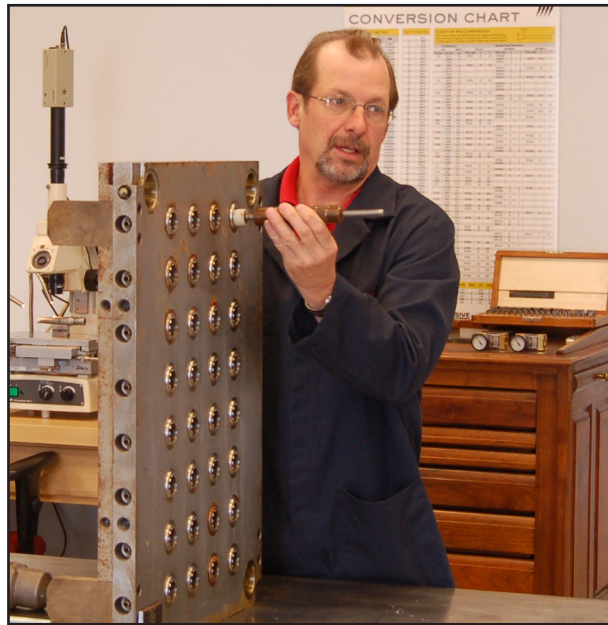

A variety of Tool Transfer options are available depending on customer requirements::

- **Off-site coordination and management**

ToolingDocs can work with customers via Webex or teleconferencing to help coordinate and manage the tool transfer process.

In-house assessment and training services.

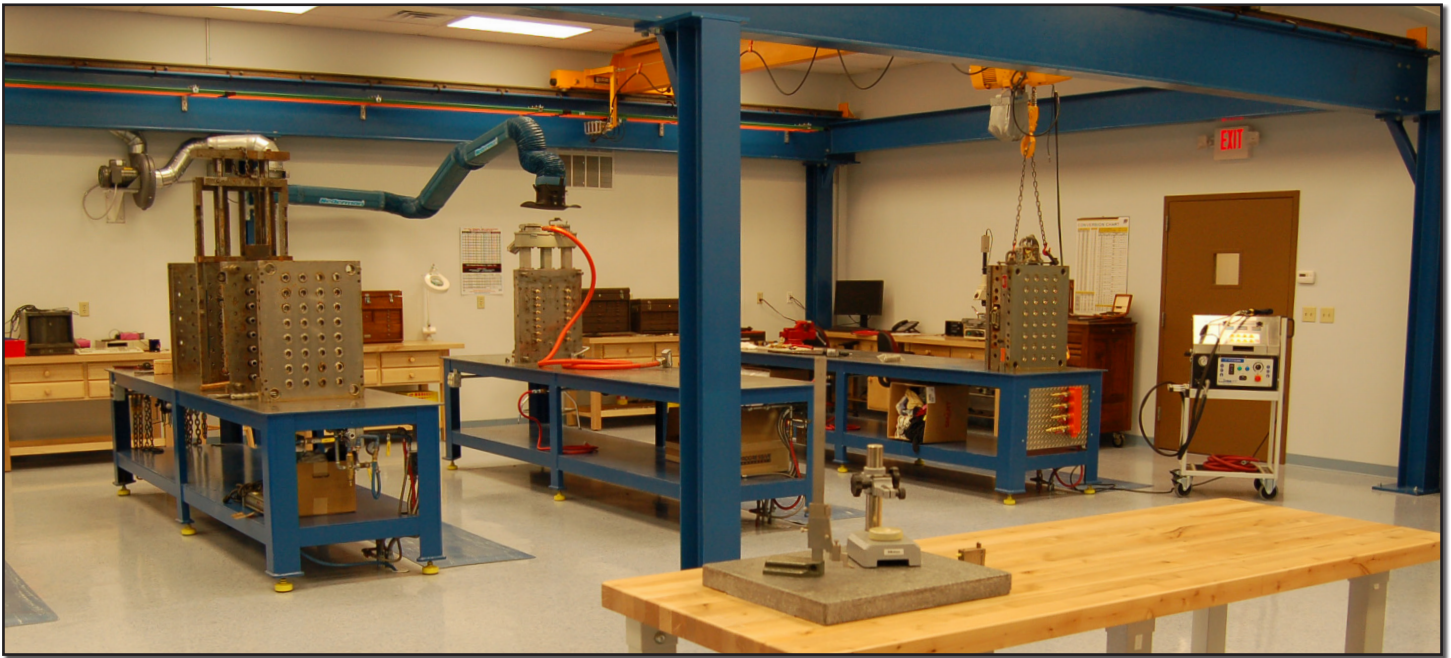

Skilled tech's capturing critical dimensions of your mold.

- **On-site coordination, management and training**

ToolingDocs can train staff at both the sending and receiving sites to help coordinate key aspects of the transfer.

- **Tooling service, review and preparation at the ToolingDocs Mold Maintenance Center in central Ohio**

– Experienced repair techs will clean and repair your molds. ToolingDocs is capable of performing 'plate by plate' bench inspections including visual and dimensional inspection of your mold. We will provide inspection reports and digital images to capture what was observed and measured during this process. Every mold that is serviced and inspected will have its own "Mold Book" and data will be up-loaded into the MoldTrax Maintenance Tracking System for the creation of a comprehensive electronic history file of the mold. We will then carefully prepare and pack the mold, spare components and documentation for shipment. This will ensure that the mold is ready to run when it reaches its final destination.

State of the art facility designed specifically for mold maintenance.

Unbiased Service Ensures a Quality Transfer

ToolingDocs' core competency is mold maintenance – not mold building or manufacturing replacement components. We specialize in systematic mold repairs and proper documentation procedures of mold maintenance. That is what we do.

There are undeniable benefits to having an independent, third party like ToolingDocs perform inspections, produce comprehensive evaluations of the molds, service them and prepare them properly for shipment.

Too often a mold will arrive at its final destination unable to run due to improper preparation, protection or packaging for shipment. These surprises can cause delays for start-up, and will require time and sometimes a lot of money to

A comprehensive "Mold Book" to re-start the documentation process for your mold.

Cleaning, repairing and inspecting molds.

restore the mold to production readiness. This work must either be done in-house (more burden for the receiving shop) or farmed out to the "local" mold shop, causing more delays and incurring more costs for having the mold serviced.

With ToolingDocs, there's no emotional attachment, no finger-pointing, just proven processes executed by experienced technicians that will get the tooling from point A to point B, ready to run.
